An Oiling System That Can't Be Beat

BESIDES needing only one adjustment for perfect operation, the Primrose separator has a splash oiling system—the best method of oiling in use today. A quarter turn of the handle sends a plentiful supply of clean, fresh oil to every bearing, including the neck bearing. A window in the side of the frame tells you when the oil is at the correct level, and—here is the most important feature of all—as new oil is poured in, the used oil is siphoned out into the waste can so that the oil in a Primrose separator is always a good, clean lubricant.

Where can you beat that system? Good, clean oil, supplied to every bearing at the start—no chance to ruin your machine by forgetting to turn on the oil—no danger of running with any bearing dry—no chance for oil to get into the milk bowl, or to leak through the frame, or to come out anywhere except into the waste tank.

The Primrose is a real cream separator. Come in and let us show you why it is the best machine on the market today, bar none.

St. Clair is assuredly distinguished in having three citizens in office at the seat of government. Major Ralph Duff has been Governor-Sleeper's private secretary since the latter was elected; Franklin Moore is an active member of the House of Representatives, and, with the beginning of the new year, H. A. Hopkins assumed the duties of assistant secretary of the senate.

It's just impossible to please everybody. For years people have been asking "Why in the blankety blank don't you stop the paper when the time is up?" And now that we have complied with government orders to do that very thing, others ask "Why in the jumping jingoes did you stop my paper?" Oh, well! As David Harum said, "A certain amount of fuss is good for a dog," and so it may be with the publisher and trouble.
